

## Save the dolphins

By A. Dolphin

I am a friendly dolphin and I am writing because nowadays people pollute the ocean. Some of my dolphin family and friends died or were caught by fishermen. My brothers got hurt by a human's fishing net. As a result, there are very few of us left in the sea.

The first problem we are facing is reclamation near our home. You keep turning sea into land for building houses. Therefore, there are fewer places where we can live. The noise of building makes me feel dizzy all day. Some of my relatives died because of this! It is very important to stop turning sea into land. We will have nowhere to live unless you stop land reclamation near our home. We will die unless you stop building houses near our home. You can save our lives or build the houses. I hope you can make the right choice!

The second problem we are facing is water pollution because many people are selfish and pursue convenience. Therefore, fish and dolphins become ill and die. Food shortage makes us starve. No food and no friends make me cry. Dolphins will become extinct unless people stop dumping toxic waste into the sea. Toxic waste is poisonous! I beg you to handle the toxic waste carefully and avoid dumping it into the sea.

The third problem is fishing in areas where dolphins live. Therefore there are fewer fish for dolphins to eat. We are hungry and starve all night! Please don't fish in areas where we live.

People should stop creating those problems and protect us. Otherwise, you will never see us again soon. Help us, humans. Our lives are in your hands!
